PRESENTATION

ArtinVitro is a microenterprise that creates modern, beautiful and didactic products, whose objective is to give the client the opportunity to have plants that only need light to grow, without the usual care!

With a production volume of 2000 plants per month, the company's initial objectives are to make the products known throughout the market and can be an excellent alternative for:

- People who like plants but who do not have much time / patience or even space to have them, thus being ideal for more cosmopolitan environments;
- Children / young people who can learn or visually re-learn ecological scientific concepts (such as the importance of plants in the water cycle, photosynthesis, total plant anatomy ...);
- Commercial spaces such as hotels, restaurants, spas, among others, where our plants can beautify their spaces without having to worry about their maintenance, becoming medium / long term more economical than traditional plants.

Our products have very competitive unit prices, varying that they can undergo changes depending on the amount ordered and the customization of the product. All technical characteristics are described in the "Products" sheet in this document.

Ask us for a quote to resell the products and enjoy the unique discounts for resale plus the discounts for large quantities.

Graciously,
Artinvitro
